Reg.no.:25BAI10114

Course name: introduction to problem solving and programming

Course code: CSE1021

Slot: A11+A12+A13

Faculty: Pavithra mam

ClassNo.BL2025260100797

## Project title: Determine weather

Description:

Creating a **weather-determining website** serves an important purpose in today's fast-paced, information-driven world. People rely on accurate, real-time weather updates to plan their daily activities, travel, work, and safety decisions. A dedicated weather website provides users with quick access to

localized forecasts, severe-weather alerts, temperature trends, and climate data—all in one convenient place.

Additional information is present in the project README file
